

# ACTA MECHANICA

Vol. 97, 1993

## Contents

### Contributed Papers

- Bregman, P. C., Kuipers, M., Teerling, H. L. J., van der Veen, W. A.:** Strength and stiffness of a flexible high-pressure spiral hose. . . . 185–204
- Brock, L. M.:** Early effects of temperature-dependent yield stress in a transient analysis of fracture. . . . 101–114
- Chen, X., Batra, R. C.:** Effect of frictional force on the steady state axisymmetric deformations of a viscoplastic target. . . . 153–168
- Gulwadi, S. D., Elkouh, A. F., Jan, T.-C.:** Laminar flow in an annulus between two concentric rotating porous spheres. . . . 215–228
- Guran, A.:** Influence of various types of load-dependent supports on the stability of a compressible column model. . . . 91–100
- Guran, A., Plaut, R. H.:** Stability of a column with a follower load and a load-dependent elastic support. . . . 205–214
- Kafoussias, N. G.:** On an impulsively moving heated cylinder. . . . 63–69
- Kanarachos, A., Vournas, I.:** Multigrid technique applied to the compressible Euler equations. . . . 23–40
- Kouris, D. A., Nuxoll, J. P.:** Elastic analysis of the half plane inhomogeneity problem. . . . 169–184
- Liu, G.-L.:** Variational principles and generalized variational principles for fully 3-D transonic flow with shocks in a turbo-rotor. Part II. Rotational flow. . . . 229–238
- Richardson, L., Straughan, B.:** A nonlinear energy stability analysis of convection with temperature dependent viscosity. . . . 41–49
- Romeo, M.:** Inhomogeneous waves in transversely isotropic dielectrics. 51–61
- Sladek, V., Sladek, J., Markechova, I.:** An advanced boundary element method for elasticity problems in nonhomogeneous media. . . . 71–90
- Tay, T.-S.:** On the infinitesimal rigidity of an  $n$ -ring. . . . 141–152
- Theocaris, P. S.:** The beneficial influence of matrix anisotropy in fiber composites. . . . 127–139
- Wu, C. S., Budhu, M., El-Kholy, S.:** Finite strain elastic closed form solutions for some axisymmetric problems. . . . 1–22

### Note

- Bauer, H. F.:** Natural frequencies and response of spinning liquid column with apparently sliding contact line. . . . 115–122

Listed in **Current Contents, Mechanics**

Reviewed in **Applied Mechanics Reviews** and **Mathematical Reviews** and

**Zentralblatt für Mathematik und ihre Grenzgebiete/Mathematics Abstracts**

Abstracted by **INSPEC, Metals Abstracts** and **Engineered Materials Abstracts**

Covered in the **MSCI**
